

Computer Languages	Ansible, Bash, C, C++, Cloudformation, HTML/CSS, Go, LaTeX, Markdown, Powershell, Puppet, Python, SQL, Terraform, x86/AMD64 Assembly
Operating Systems	CentOS/Red Hat/Rocky Linux, Debian/Ubuntu, Arch Linux, Windows 7/8/10/Server
Infrastructure	AWS, GCP, Kubernetes, OpenStack, TeamCity, ISC DNS/DHCP, Hashicorp Nomad/Consul/Vault, Docker, MySQL, Apache, Nginx, Grafana/Prometheus, Nagios, Redis, RabbitMQ, Ceph Storage
Identity/Mail	OpenLDAP, Postfix, MIT Kerberos, Active Directory, G Suite, Office 365 User Management

Experience**Yext - Systems Engineer/Tech Lead (*Infrastructure Operations*)*****May 2023 -***

- Spearheaded the design and lifecycle management of a high-impact production Kubernetes cluster using Cilium on AWS EKS. Standardized EKS operations at Yext by developing reusable Terraform modules and comprehensive documentation, establishing the architectural blueprint for future net-new Kubernetes clusters, including GKE.
- Led the end-to-end migration of an on-premise Windows 2012 C#.net system to AWS post-acquisition. Modernized the environment by implementing Yext-standardized deployment pipelines (Terraform/Ansible), creating a standardized Windows 2025 AMI, and architecting an autoscaling, cost-optimized Selenium Grid on ECS.
- Designed and implemented a scalable multi-cloud account provisioning strategy leveraging AWS Control Tower AFT and GCP Project Factory, driving the transition toward automated, self-service infrastructure management.
- Provide mentorship to junior engineers and lead the onboarding integration for team members joining via acquisitions.
- Served as a cross-functional liaison and architect, collaborating with internal engineering teams to identify infrastructure bottlenecks, cost-saving opportunities, and drive strategic architectural improvements across the organization.

Yext - Technical Operations Specialist (*Infrastructure Operations*) *August 2021 - May 2023*

- Managed a hybrid infrastructure of 2000+ CentOS/RedHat Linux servers across Baremetal, OpenStack, AWS, and GCP.
- Developed and maintained Infrastructure as Code (IaC) using Terragrunt, Terraform, and Ansible
- Eliminated operational toil by automating manual workflows with Python and Bash scripting, alongside streamlining CI/CD pipelines in TeamCity.
- Refactored several legacy Ansible/Terraform roles and modules to improve reliability and operational burden of deployments
- Served as Subject Matter Expert (SME) for core infrastructure services including Hashicorp stack, RabbitMQ, OpenStack, Ceph, and Linux systems.
- Maintained 24/7 system availability through on-call incident response and proactive monitoring utilizing Nagios, Prometheus, and Alertmanager.

Columbia Secondary School - IT Specialist***February 2018 - August 2021***

- Troubleshoots and resolves hardware and software computer issues (Windows/Mac OS X)
- Modify system images and image machines using Norton Ghost and MDT/WDS
- Manages G Suite domain of several thousand users
- Builds and implements new software tools in Python and C++ to help improve the workflow and efficiency of the IT team

Super Alert - Freelance

August 2019 - July 2020

- Wrote Golang code to expand on the open source Grafana monitoring software
- Wrote a Python flask based webhook to integrate Amazon SNS with Grafana and containerized it using Docker

Education

John Jay College of Criminal Justice, New York, NY

August 2019 - Jan 2021

B.S. Computer Science and Information Security

City College of New York, New York, NY

August 2017 - Dec 2019

Certificates

- **Google IT Support Certification** *Jan 2021*
- **NYS Seal of Biliteracy (English and Spanish)** *June 2017*
